

## Survey Design

The Caribbean Atlantic Margin Deep Imaging survey is designed to assist oil companies to better understand the regional tectonic framework of the various basins along the Southeastern Caribbean and Western Atlantic margin of Northeast South America. The survey includes a Detailed Grid, off Trinidad and Tobago and Grenada, to provide more detail, tying the producing areas to the underexplored deeper part of the Tobago Trough.
The Tobago Trough is an underexplored area flanked by oil and gas production to the East and South in Barbados and Trinidad and Tobago and recently, with a new gas discovery offshore Grenada. Seismic interpretation of this survey along with the 2013 Geoex MCG 2D survey in Barbados, shows a thick sedimentary succession in the Tobago Trough. The presence of a mature La Luna oil prone source rock in the Trough seem likely.

The Caribbean Atlantic Margin Deep Imaging survey ties the Sandy Lane well in Barbados in addition to several deeper wells in Trinidad and Tobago.

Data has been processed in both time and depth, utilizing the latest broadband technology. Gravity and Magnetic data were also acquired with the survey.

The Caribbean Atlantic Margin Deep Imaging survey was acquired using a 37.5 meter shotpoint interval and Continuous recording 18 second record length. The survey covers Barbados, Trinidad and Tobago, Grenada and St. Vincent.

The surveys are well positioned for upcoming License rounds in the region.

Geoex MCG 2D Survey Acquisition Parameters

| Concept | Parameter |
| :--- | :--- |
| Acquisition system | 37.5 m |
| Shotpoint interval | 2 ms |
| Sample rate | Sentinel Solid Streamer |
| Cable type | 960 |
| Number of receivers | 12.5 m |
| Receiver interval | 12 km |
| Cable length | $12 \mathrm{~m} \mathrm{(+/-1} \mathrm{m)}$ |
| Cable depth | 160 |
| Fold | 18 s (Continuous Recording) |
| Recording time | Continuous Recording |
| Recording mode | Solid: Sercel Flexible Hydrophone |
| Receiver type | G-GUN |
| Source type | 5,020 in ${ }^{2}$ |
| Source volume | 1 |
| Number of sources | 2,000 psi |
| Pressure | 7.5 (+/-1 m) |
| Source depth | 3 HZ analogic-Filter antialias linear |
| Filter | 8058 IEE |
| Data format | 150 m |
| X min | $12,200 \mathrm{~m}$ |
| X max | Yes |
| Gravity | Yes |
| Magnetic |  |
